New Patients Welcome
NO REFERRAL necessary

I.V. What is Sedation?

Intravenous (I.V.) Sedation, also called Conscious Sedation, medication is administered though intravenously to make you relaxed, drowsy and fall asleep. Shortly after the injecting the sedation medication, patients enter a relaxed and calm state. I.V. Sedation can maintain this stage throughout the procedure.

It is the most effective method of reducing anxiety and overall awareness than oral and gas sedation. It is cheaper and less invasive than general anesthesia.

With I.V. sedation, various dental treatment can be performed under very minimal psychological stress and enhanced patient comfort. There is some variation of effect among individuals.

Who would need I.V. Sedation?

- Fearful or anxious patient
- Bad experience with dental treatment in the past
- If you have extensive dental treatment
- If your dentist could not numb your teeth
- If you have a severe gag reflex
- Allergic reaction with local anesthesia
- Medically compromised patients
- Autism or Autism Spectrum Disorder(ASD)
- Epilepsy
- Alzheimer
- Dementia

What is the benefits of I.V. Sedation?

- Fall asleep
- Help forget most of the procedures
- Safe and effective
- Reduce anxiety
- Ideal for sensitive teeth
- Perfect for longer dental procedures
- Reduce gag reflex

What procedure can be done under I.V. Sedation?

All dental procedures can be done very comfortably under I.V. sedation:

- Dental exam
- X-ray
- Dental cleaning / Scaling
- Dental fillings
- Root canal
- Crowns and bridge
- Gum surgery
- Wisdom teeth extraction
- Complicated teeth extraction
- Full mouth reconstruction
- Dental implants
- Sinus lift and bone graft
